ALL I NEED IS
POWER

Enjoy the smooth yet powerful engine,
give you riding excitement like never before.

3ZR-FAE to achieve both high output
and efficient fuel consumption engine
(with Valvematic)

Valvematic is a system that controls the volume of air
intake by cooperative control of electronic throttle and
the intake valve that continuously varies
the valve lift amount/valve timing.

Especially when the load is at low or medium level,
it opens the intake valve at the early stage of
air intake process.

After letting in the required amount of air, it closes
the intake valve to substantially reduce the pumping
loss. Due to a synergetic effect with CVT [Continuously
Variable Transmission], smooth start-off/acceleration
feel & powerful driving performance
have been realized in all engine speed ranges.
