

AMG S-CLASS

 **AMG**

AMG S-CLASS

Anyone who wants to drive a car of character today, a car which is refined and has virtually inexhaustible reserves of performance, will find little alternative to the AMG S-class.

This car has all those qualities which you particularly prize in a Mercedes: active and passive safety, quality in the Mercedes-Benz sense of the term, intelligent progress, reliability and environmental compatibility. And since an AMG remains a Mercedes throughout its life, original Mercedes-Benz guarantees apply.

The Mercedes-Benz S-class is already a byword for the very highest standards in vehicle building and is in the frontline of avant-garde engineering. We have made our modifications to the S-class, as to all the other Mercedes models, with the creativity and affection which a Mercedes and its owner deserve.

We have added to the S-class those features which you expect of AMG: visual and technical individuality and an emphasis on sportiness which further increases the pleasure to be gained from driving this unique car.

The aesthetics of power.
The beauty of the practical.

Even today, a lot of traditional hand craftsmanship still goes into the AMG S-class. This method of manufacture has become rare. It calls for fine judgment and a keen attention to the smallest details. We give these cars the clean looks which typify

an AMG Mercedes. Distinctive features – but used sparingly. The AMG S-class derives its appeal not from visual frills but from a classic styling treatment which – both inside and out – is designed to appeal to discriminating tastes.

are optionally available in
silver or polished version*

Exclusiveness in all details

The appearance of the AMG S-class exudes at every level a refinement in pleasing contrast to what one is accustomed to in other vehicles.

This goes even for the smallest features.

The AMG rims

The styling of the AMG rims reflects the high standards of the AMG S-class generally. The multi-part forged 18 inch wheels provide broader track at the front and rear.

The rim itself is produced using a newly developed technique.

The larger dimension, in combination with wide tyres, ensures high standards of track-holding and precise steering at higher speeds and during cornering.

The AMG sports running gear

The new AMG sports running gear now features tauter, sporty suspension and damping.

As a result, nothing can shape the confident road holding, active safety is increased through the AMG special springs and dampers, while the ride comfort of the S-class can still be enjoyed to the full.

The AMG sports running gear improves active safety at high cornering speeds.

The new multi-part AMG wheels of sophisticated forged/rolled design have undergone trials in the space industry. The weight of the wheel is low, nevertheless its load-bearing capabilities have been considerably increased.
