Notes:

1) The method of calculating fuel consumption according to 80/1268/EEC following on from 99/100/EC takes the actual unladen weight of the vehicle into consideration. Additional equipment can therefore lead to classification in a higher weight category and the higher consumption figures corresponding with that weight category. In addition, depending on driving style, road and traffic conditions, environmental influences and vehicle condition, the fuel consumption values obtained in practice may differ from the values measured by the above test method.

2) Due to the knock control system Regular unleaded fuel (min. 91RON) can be used instead of Premium unleaded resulting in a slight decrease in performance.
