e-Comfort Drive

When passing speed bumps, this hybrid technology manages the motor to reduce vehicle shaking and provide a smooth ride on an uneven road.

When accelerating, the hybrid system controls the vehicle's motion such that the driver experiences less shaking and more linear acceleration.

e-Dynamic Drive

When the vehicle approaches a turn, the hybrid system regulates the vehicle's movement to execute torque vectoring while simultaneously maintaining the ideal level of tyre grip for dynamic handling performance.

During overtaking acceleration, this function provides a quick acceleration response and improved torque performance.
